### The Energy-Water Nexus in a Changing World

Growing populations in a changing world motivate sustainable use of resources. Sustainable engineering and management actions require interdisciplinary approaches due to the close relationship between vital resources, including energy and water. The energy-water nexus is a complex relationship with different opportunities for solutions. This talk will present an introduction to the energy-water nexus, revealing some of the possible areas in which community leaders and decision-makers can contribute to sustainable energy and water management.
